SilverDAT Rental vehicle rates index

SilverDAT Rental vehicle rates index	
Scope of service	SilverDAT Rental vehicle rates index
Version number	05.2024.0.1
Short description	<p>SilverDAT Rental vehicle rates index is a web application for mapping the rental vehicle classes and user loss-of-use costs as well as rental car costs. The data used for determining the classifications are in-house market research and the reported price lists of the vehicle rental companies.</p> <p>The vehicle can be identified based on the 17-digit vehicle identification number with a licensed SilverDAT VIN request, by entering a licensed SilverDAT Europa-Code®, or by using the KBA code. Alternatively, the vehicle can be selected manually via a search tree. Based on the input data (first registration), the rental vehicle class and loss of use as well as the rental car costs are determined. The following scope is offered by the rental vehicle rates index.</p> <ul style="list-style-type: none">▶ Germany-wide rental vehicle prices taking into account the postcodes and the search for perimeters▶ Vehicle rental prices and the optional costs and insurance coverage▶ Allocation of rental vehicle classes (available for LCVs and passenger cars)▶ Determination of loss of use (only available for passenger cars)▶ Current and historical data determination <p>The rental vehicle rates index is available in the following countries: Germany.</p>
Limitations	Third-party data is accepted by DAT without being checked. DAT is not liable for ensuring that this third-party data is up to date, complete, correct and usable.
Access/installation	Use of the licensed product requires an agreement to be in place regarding the SilverDAT data and information system. The system requirements for SilverDAT applications - available at http://www.dat.de/silverdat/systemvoraussetzungen - also apply.
Documentation	Manual available as PDF in the user interface.
